

AUDITRE Version 2.1.1 Release Notes

October 2004

Treehouse Software, Inc. is pleased to announce the release of AUDITRE v2.1.1. This release has been tested using ADABAS v6.1.3 through v7.4.2. AUDITRE may support releases of ADABAS later than v7.4.2, but since those releases were not available at the time of this release, Treehouse Software, Inc. cannot be certain that AUDITRE v2.1.1 will support these later releases

The following enhancements and fixes are included in this release. Note that some of these items may have been included as official zaps and fixes to previous releases of AUDITRE.

Fixes

- Auditre version 2.1.0 produced incorrect results in the reports and output files.
- Support for files created with the Large Block Interface (LBI) under ZOS and ADABAS V7.4. This fix impacts ZOS only. It will not affect non-ZOS operating systems.
